INVENTORY in action!

Matchmaking in Seconds!

Having an efficient coordinated entry referral process that allows matchmakers to place clients into units based on availability and eligibility was a priority for one of our Bitfocus communities. This community built out Clarity INVENTORY for all housing programs and configured unit-level eligibility criteria. Using the Unit Queue and the sophisticated eligibility functionality, matchmakers let the system do the work for them, reducing the matching time from minutes to seconds!

Improved Shelter Bed Visibility

The lack of shelter coordination and visibility into capacity was making it difficult for one of our Bitfocus communities to bring unsheltered households indoors as quickly as needed. During the winter months, this could be a matter of life or death.

Using Clarity INVENTORY, this community built out a new bed management process that provides real-time visibility and occupancy information on all shelter beds. Along with a revamp to their shelter referral process, the openness that INVENTORY provides has improved their efficiency and coordination of shelter placements.

- Built with flexibility in mind to meet the needs of any community.
- Add custom fields to INVENTORY screens to collect important attributes.
- Refine your matchmaking process by setting eligibility criteria at building, site, unit, and bed levels.
- See real-time occupancy and availability information on every unit or bed.
- Track the history of a unit, including turnover rates and occupancy over time.
- Take units or beds offline for cleaning and repairs.
- Use in conjunction with any of Clarity's referral methods, including the new Unit Queue.
- Automate components of your workflow to create operational efficiencies.
